

Board Certified Plastic Surgeon

Barry Neil Silberg, M.D., F.A.C.S

For more than 30 years, Dr. Silberg's plastic surgery practice has been committed to the highest standard of care and has been providing top-quality surgical care to the people of Sonoma County, as well as out-of-town patients visting from all over the United States. When prospective patients want the best in plastic and cosmetic surgery, they seek out Dr. Barry N. Silberg.

Dr. Silberg has served several terms as Chief of Plastic Surgery at Santa Rosa Memorial Hospital and is a member of the trauma team. He has performed thousands of cosmetic and reconstructive surgeries, incorporating leading edge technologies. Dr. Silberg has developed plastic surgery techniques that have been approved by the FDA and used by plastic surgeons worldwide.

Dr. Silberg sees plastic surgery as more than just aesthetics. It involves the technical expertise to perform advanced reconstructive surgeries, a keen artistic eye, and the ability to understand and listen to the desires of the individual. Translating those desires into the improved result in one's appearance often produces much more than a physical change — it can change a life.

DID YOU KNOW?

Dr. Silberg invented an entirely new way to deliver antibiotics directly into infections independent of blood supply. His company, Sonescence Inc, is currently sponsoring a Phase 2 FDA clinical study at Sonoma West Medical Center to treat severe skin and soft tissue infections, including MRSA, using this groundbreaking new technology. These patients were sent to Dr. Silberg because they failed all other prior treatments.

Dr. Silberg is committed to the community. He serves on the Board of Directors of the Santa Rosa Symphony and is a member of the Rotary Club of Santa Rosa.
